

Enterprise Pharmacy System

## Why Choose EPS?

The PDX Enterprise Pharmacy System™ is the industry's go-to for a reliable, innovative, versatile pharmacy management software solution. Developed by pharmacists and backed by the largest pharmacy-focused development team in the nation, EPS™ is the culmination of over 30 years' industry experience and expertise

## Deploy Anywhere Model

EPS operates under a deploy anywhere model, meaning that depending on your IT infrastructure needs and business goals, EPS can be deployed in any environment (i.e. cloud, distributed, virtualized) and be managed by the customer or by PDX.

## Adherence and Compliance Initiatives

EPS can easily link to a Medication Therapy Management (MTM) system/vendor, but we go above and beyond by also offering Care Rx®, the ultimate interoperable clinical services platform. Care Rx enables you to fully complete the MTM, counseling, and adherence process within a single application. Ensure you gain access to as many networks as possible by demonstrating a commitment to higher quality care with the implementation of this solution.

# EPS interfaces with several well-known and utilized pharmacy technology vendors. Ask us about our integrations and available APIs!

## Specialty Pharmacy Module

Gain access to the full-array of specialty drugs, including limited-distribution drugs, and show that your business is moving the needle toward increased patient outcomes with the tools and features mentioned below:

- Clinical documentation and pharma reporting
- Efficiently process specialty prescriptions by using specific clinical tracks to direct specialty medications to the appropriate workstation and team member
- Accept multiple payment types (Credit, Debit, In-house charge accounts, etc.)
- Multiple shipping options available, including integrations with shipping vendors

## Remote Pharmacist Module

Serve rural communities without the financial burden of having a pharmacist on site. Take advantage of telemedicine opportunities with the Remote Pharmacist Module in EPS and reach more patients than ever before.

## Implementation

Based off your fill volume, staff, and other business needs, we will work with you to determine which implementation of EPS is the best fit for your pharmacy. The most common is EPS Workflow.

## Features of Workflow:

- Deliver the right task, to the right user, at the right time by separating tasks into distinct workflow steps, or queues
- Work-load balancing between multiple pharmacies, group of pharmacies, or centralized processing center
  - Pharmacists can perform counseling and verification tasks from a remote location
  - Use central call centers to process refill requests, accept new verbal prescriptions from prescribers, perform Data Verification, and process third party exceptions
- Our promised-time engine ensures prescriptions are ready when the patient comes to pick them up

## Other Popular Features

Today, patients' main expectation for care is immediacy, and as pharmacy transitions to more of a service-based model, we've developed tools to ensure your business is prepared for this expectation among others. With features like the ones below, EPS helps pharmacy to provide the best patient care:

- **Shipping Queue** – Patients are notified via your preferred method of communication once their prescription is available in Will Call and are given the option to have it delivered to their home and pay within the app. Your customers will appreciate the ease and convenience of this popular feature!
- **AutoFill® & AutoMail®** - promote persistence with the ability for patients to opt-in to fill their prescriptions automatically along with automated mail order delivery.
- **Mobile messaging** – EPS supports outbound patient communications such as texts, phone calls, app notifications, and emails, depending on patient preferences.

## Delivering Healthcare Innovation that Matters to You

Backed by the largest pharmacy-focused development team in the nation, PDX is committed to constant innovation and collaboration with our customers. From our adoption of a continuous development methodology to our dedicated support and sprint team offerings, it is our mission to propel the role of pharmacy in healthcare.

**\* Condensed filling mode is also available for independent pharmacy and small operations.**
